Attention: Mr. Roy Harbert

SUBJECT: EXCLUSION SITE APPLICATION
YOUR LETTER OF APRIL 2, 1984

JUN 11 10 59 AM '84
IN STATE DEPT OF HEALTH

Dear Mr. Harbert:

We are sorry for our delay in answering Mr. Olivers letter, but Mr. Westman, President of North Manchester Foundry recently underwent lung surgery.

Your letter states that our phenol levels are 1000 times the drinking water standard. It seems odd, that our Commissioned Engineers (R-T) were not aware of this deviation. Is this a new standard that has just been adopted?

Efforts to Reduce Presence of Phenol

We are presently involved in a program of reducing the amount of the agent in our Foundry operation that we believe to be the source of phenol. Reductions are in affect with some projections of reductions of 50% or more as possible. Unfortunately, this may not be enough and in light of this we are pursuing other methods, which must be in affect elsewhere in the industry.

Alternate Disposal Area

We have also, been approached, by an area cemetary that is in need of a significant amount of fill. We will be obtaining a specific description of this site and we hope that it may be found as acceptable to you, as this area is decidedly away from any river or significant drainage area.

We will continue to keep your office informed on progress of our disposal program.

Respectfully,
NORTH MANCHESTER FOUNDRY, INC.

Walt Linn
